### Description

The Hawa Variotec 150 GV is a hardware system with outstanding running properties around curved structures. Thanks to a trolley with 2-point suspension, glass sliding walls can be moved extremely quietly and smoothly along curved tracks. With its advanced technology, it is also regarded as unique among sliding hardware systems. Sliding revolving doors and sliding swinging doors can be integrated at any desired point. This system ensures that you can quickly and easily provide ideal complete solutions, including fixed glass for room separation.

## Applications

This hardware system is suitable for use wherever high quality, elegance and quiet operation are called for, e.g. in shopping centres, hotels, restaurants, banks, airports, railway stations, industrial premises, winter garden, administrative buildings, etc.

## Features of the Hawa Variotec 150 GV

- Modular system
- Trolley with 2-point guide wheels
- Progressive vertical adjustment (+6/-3 mm)
- Extremely smooth and quiet cornering
- Elegant top-fixed suspension and glass retainer
- Precision glazing
- Minimum axis radius, 4000 mm (13'1  $\frac{1}{2}$ ")
- All components installed in profile
- Secure locking mechanism
- Minimal space requirement in stacking area
- Running track with facing

## Glass cutouts

Both glass ESG (fully tempered monolithic glass) and VSG (fully tempered laminated glass) can be used.

- Glass thickness sliding door ESG (fully tempered monolithic glass):  
10/12/12,7 mm ( $\frac{13}{32}/\frac{15}{32}/\frac{1}{2}$ "), thickness tolerance  $\pm 0,3$  mm
- Glass thickness sliding door VSG (fully tempered laminated glass):  
2x5  $\pm 0,2$  mm  $\rightarrow$  film thickness 0,76/1,52 mm  
2x6  $\pm 0,2$  mm  $\rightarrow$  film thickness 0,38/0,76 mm
- All glass edges are seamed; maximum 1 mm ( $\frac{1}{16}$ ") in the glass cutout
- VSG (fully tempered laminated glass) permissible with max. offset of 2 mm ( $\frac{3}{16}$ ") in the glass cutout

Subject to modification. Metric specifications are exact. Inches are approximate.

## Further examples of application

- Sliding door
- Standard profile
- Guide slider in bottom guide channel
- Without locking mechanism
- VSG (fully tempered laminated glass)

- Sliding door
- Straight profile, 105 mm (4 1/8 inches)
- Guide slider in bottom guide channel
- Without locking mechanism
- ESG (fully tempered monolithic glass)

- Pivot door
- Top, straight profile, 105 mm (4 1/8 inches)
- Bottom, straight profile, 230 mm (9 1/16 inches)
- Without locking mechanism
- ESG (fully tempered monolithic glass)

## Layout examples

The layout examples shown here clearly demonstrate the flexibility of the Hawa Variotec 150 GV, as well as the creative potentials it offers. This system permits the use of fixed glass fittings, swinging doors, sliding swinging doors and curved installations, etc. Each track can be customized on request for almost every curvature radius. The minimum axis radius for curved all-glass sliding walls is 4000 mm (13'1  $\frac{1}{2}$ ").

Countless floor plans – 4 examples:

Straight installation with parallel stacking and pivot door

Straight installation with parallel stacking and locking door

Curved installation with fanned stacking and locking door

Installation with directional change, 90° stacking and pivot door

## Space-saver

The mobility of Hawa Variotec 150 GV makes it possible to save a considerable amount of space. It can stack doors in even the tiniest of spaces. Layout options are limitless thanks to two cover cap designs.

Straight and curved installations, and installations with a directional change of up to 15°, can be implemented using the standard cover cap 19903

Cover cap 13587 is required for installations with directional changes between 16° and 90°

### Cornering technology

With this sliding-door hardware system it is possible for straight running tracks with integrated facing and curved sections with or without interior facing to be assembled in combinations of 15, 30, 45, 60, 75 and 90 degrees according to individual requirements. Special customized versions can also be provided. The minimum radius is 4000 mm (13'1  $\frac{1}{2}$ "). This flexibility permits simple storage, as well as planning and modifications at short notice.

### Parking area with concealed interior

### Parking area without concealed interior

### Connecting bracket for ceiling structure

### Glass retention eccentric

A glass retention eccentric with side wedge permits optimum and simple attachment of the glass. Before installation, the glass ESG (fully tempered monolithic glass) or VSG (fully tempered laminated glass) have to be prepared with cutouts.

### Seals and glass edge protection

The system permits the integration of horizontal and vertical seals; these can also be fitted retrospectively. A transparent glass edge protection profile and the self-adhesive rubber profile are recommended to protect vertical glass edges. The latter not only protects the glass edge, but also reduces draughts to a minimum.

The glass edge protection profile is made of transparent plastic and is fitted to the glass edge with double-sided adhesive tape.

The self-adhesive rubber profile in black or translucent reduces draughts to a minimum and protects the glass edge.

The horizontal brush seal is inserted into the suspension profile and protects against draughts.

### Glass suspension and retainer profile

Unightly operating elements such as locks, top-fixed suspension and guide plates are integrated into the profile. The only visible component is a glass retainer which is of highly attractive design.

### Better safe than sorry

One- or two-bolt safety lock is available for securing all-glass sliding doors: single-turn with toughened bars and 20 mm ( $\frac{25}{32}$ ") feed, cylinder aperture 17 mm ( $\frac{11}{16}$ ") or 22 mm ( $\frac{7}{8}$ "), or with square/hexagon socket. Closure in bottom sleeve with spring-loaded cover or in the bottom guide channel.
